

Aluminium
Doors

Our vision is to change the way people buy windows and doors

Our mission is to create better spaces to work, live and play in

Simplified process + better quality outcomes

More than supplying windows and doors, rather delivering end to end solutions. Adding real value by simplifying how you bring everything together at every part of the journey.

We're focused on people, on better process and products. Simplifying to streamline what delivers the biggest difference to people. To our partners, clients and customers.

How we do more for you

At UNO, its top of mind to create healthier homes & buildings for all New Zealanders.

So for us, it's not just decisions we help you make at the time of the project, we help you make decisions that will have an ongoing positive impact for you, your family and your home

Discover the key UNO features

Our unique thermal frame is designed by our in-house technical team. Each part is carefully considered to bring you a strong, effective and superior window or door. Thermal properties mean that less heat is lost or transferred through the window, making the building more energy efficient.

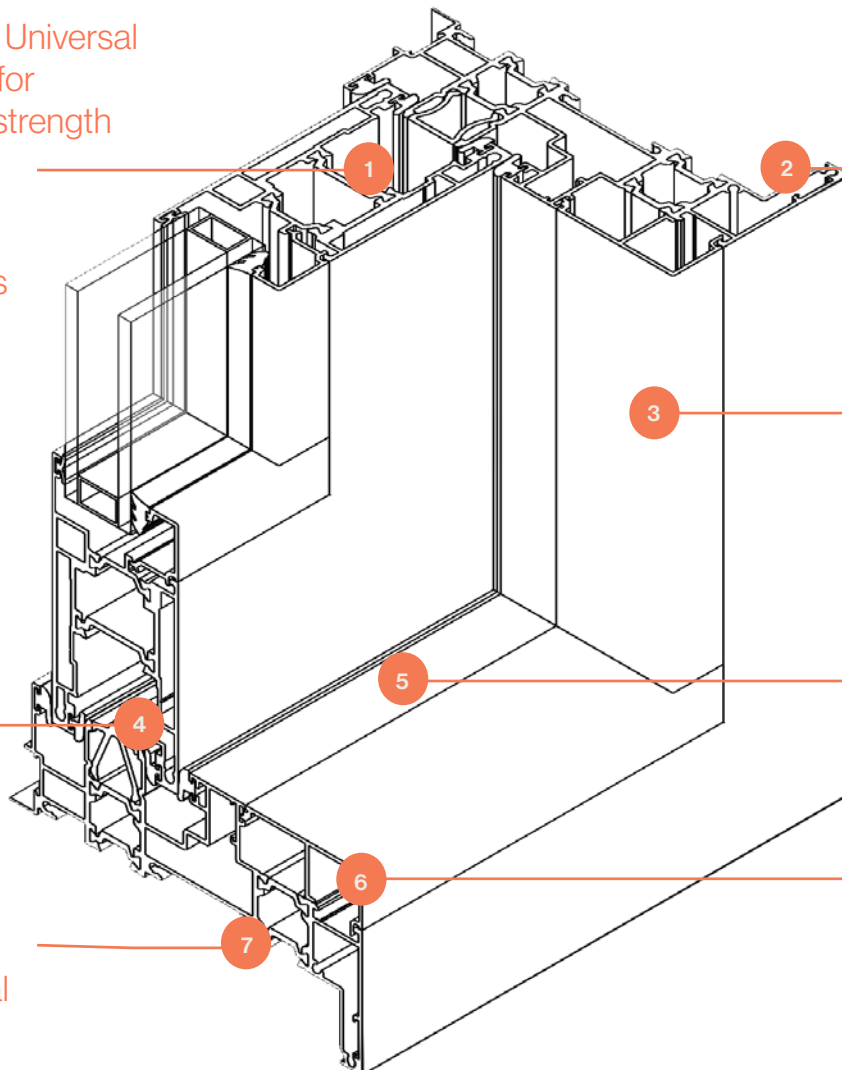

By working through our own design team with feedback straight from customers and our factory, we've created a seamless end-to-end solution, all tested to NZ Standards.

50mm Platform - Universal
across the range for
consistency and strength

Greater strength
than standard
residential profiles
on the market

Plastic track
eliminates
powdercoat
scrapes along
the sill.

Hinged & French Doors

Hinged Doors are a great access door, simple and easy to use in all situations, whether in the home or at a commercial building. They are available in an open in or open out frame, depending on your needs.

French Doors are essentially a double set of hinged doors, but are great when you're wanting a larger opening. French doors are also commonly used at the entrance of a home for a welcoming & large opening.

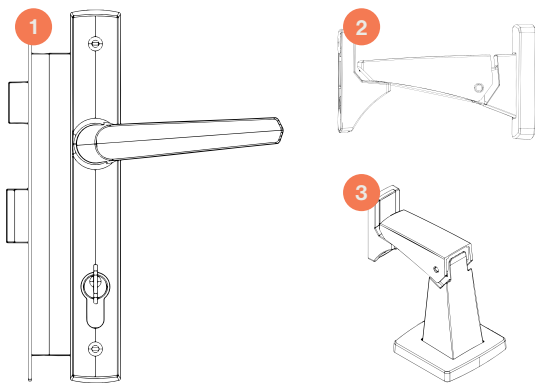

Couple a hinge or french door with awning windows or fixed windows to let in natural light or provide a range of ventilation options.

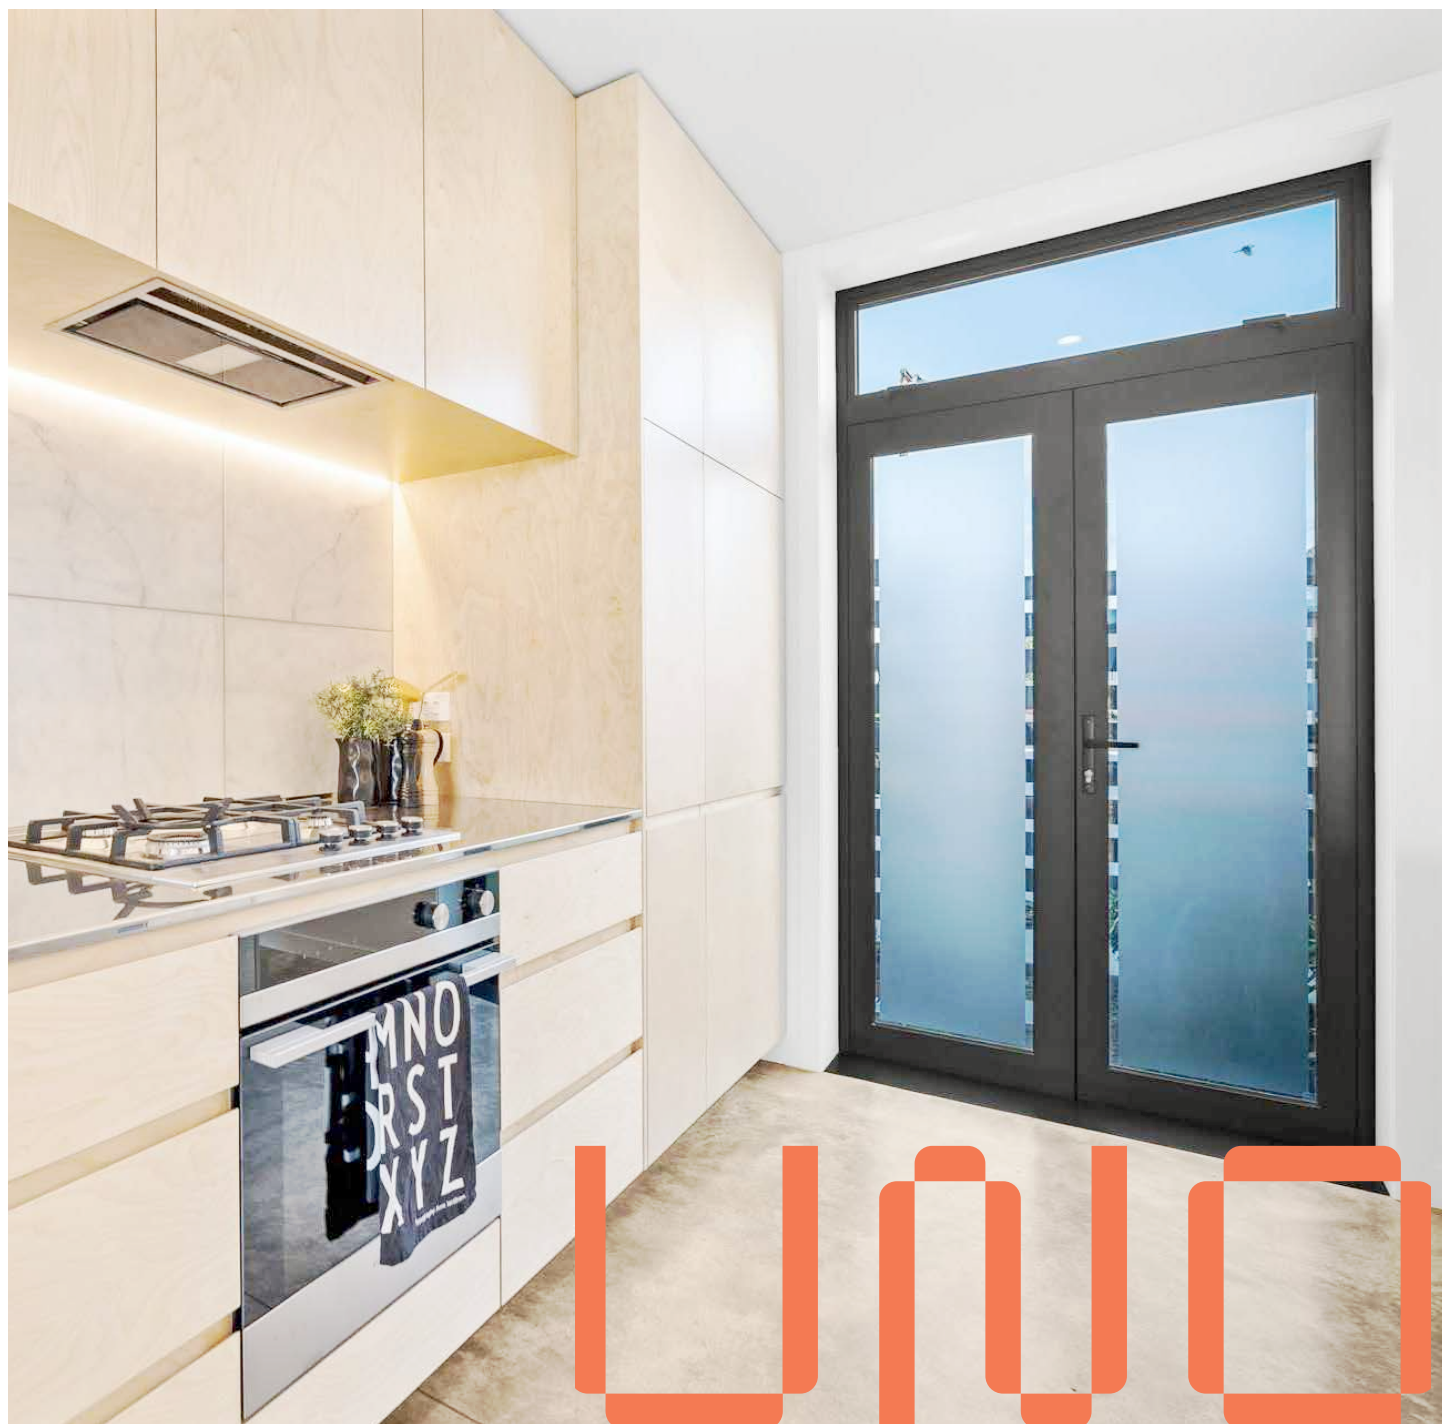

See page 11. for common configurations

Door Hardware

2. Wall Mounted Door Stop
3. Floor Mounted Door Stop

Available in all key powdercoat colours

Bifold Doors

Bifold Doors are an effective way to open up a large space. Great for connecting indoor & outdoor living areas or dividing up rooms giving you flexible space in your home or office.

Bifold doors contain specially engineered hardware which enables the doors to concertina or stack back to one or both ends, creating a large opening.

Bifold Doors can be built in many different configurations depending on the size and how the space is to be used - See *page 11. for common bifold configurations*

Bifold Hardware

Aria Twinbolt Bifold Handle

Available in all key powdercoat colours

Sliding & Stacking Doors

Sliding Doors are one of the most cost effective ways to create a large opening. Their simple, smooth mechanism is safe and easy to use - providing an ideal solution for residential projects through to commercial buildings or schools.

Stacking Doors allow for a larger opening as almost two-thirds of the width of the doors open, with the doors stacking behind the other leaves.

Rebated **flush sills** create a perfect indoor-outdoor flow between areas as well as being easy to clean, non-trip and aesthetically pleasing. All our sliding and stacking doors come with a flush sill as standard

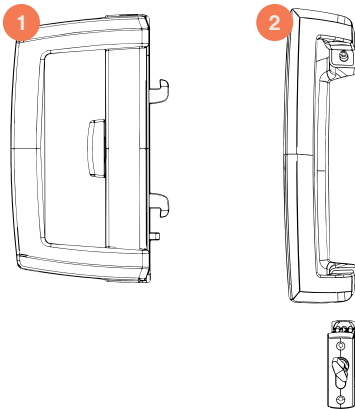

Reach out to us to discuss rebated sill options for your project or download the technical files from the doors page on our website.
