Windows

Our vision is to change the way people buy windows and doors

Our mission is to create better spaces to work, live and play in

Simplified process + better quality outcomes

More than supplying windows and doors, rather delivering end to end solutions. Adding real value by simplifying how you bring everything together at every part of the journey.

We're focused on people, on better process and products. Simplifying to streamline what delivers the biggest difference to people. To our partners, clients and customers.

How we do more for you

At UNO, its top of mind to create healthier homes & buildings for all New Zealanders.

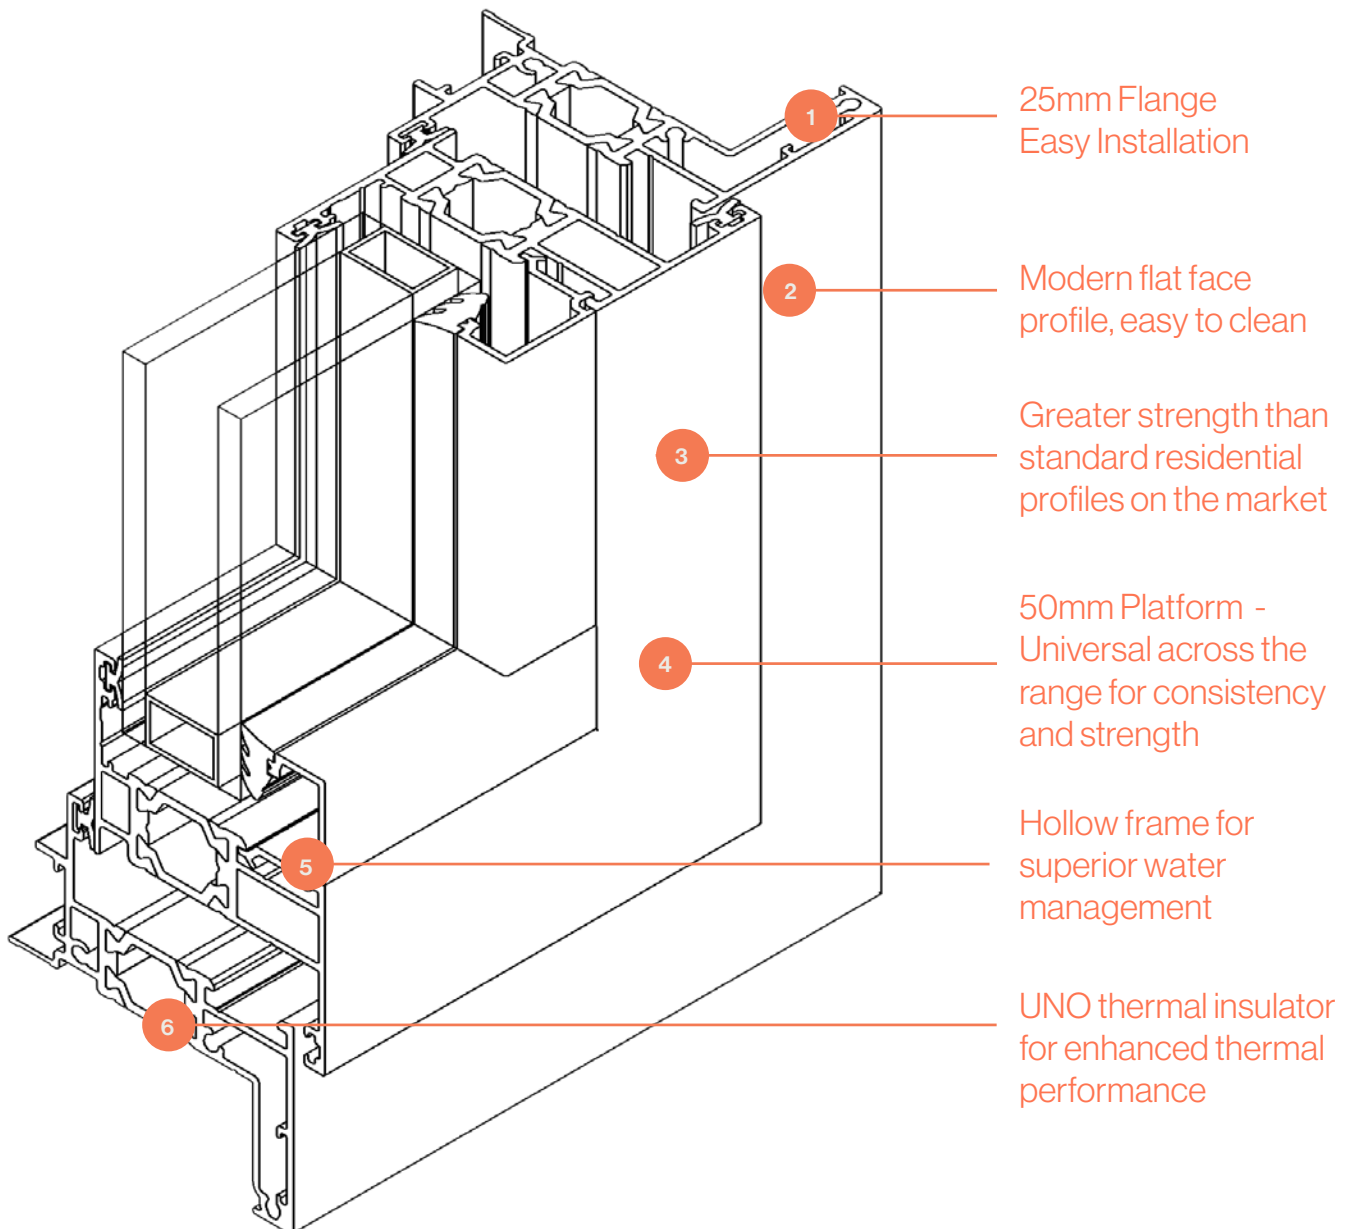

So for us, it's not just decisions we help you make at the time of the project, we help you make decisions that will have an ongoing positive impact for you, your family and your home

Discover the key UNO features

Our unique thermal frame is designed by our in-house technical team. Each part is carefully considered to bring you a strong, effective and superior window or door. Thermal properties mean that less heat is lost or transferred through the window, making the building more energy efficient.

By working through our own design team with feedback straight from customers and our factory, we've created a seamless end-to-end solution, all tested to NZ Standards.

Awning, Fixed & Casement Windows

Awning windows are top hinged opening windows. They're a great option for ventilation and are the most common type of opening window in our homes and offices. Combine a set of awning windows with fixed windows for style and flexibility.

Fixed windows are a great way to capitalise on the scenery as large panes of glass provide unobscured views. Fixed windows also work well as sidelights or for additional light beside entrance doors, or to brighten up passageways or stairwells.

Casement windows are side opening windows, equally as good as the awning window for ventilation and light. Casements are often selected as a design feature throughout a home - or when the windows are tall and the height of the window doesn't allow for an awning style opening,

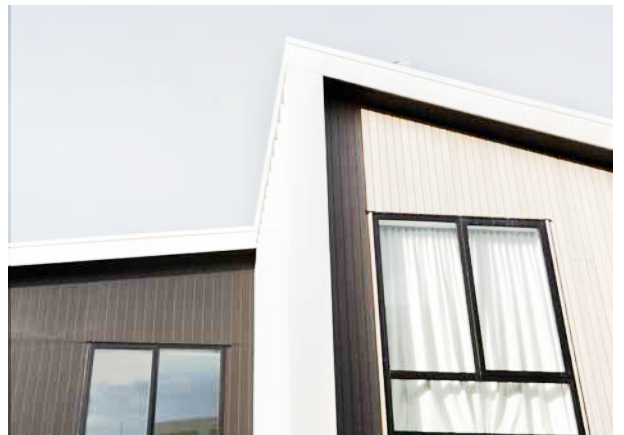

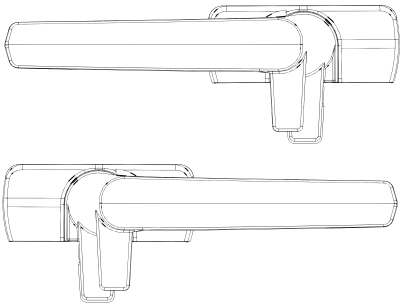

Restrictor stays are installed on opening windows when required according to the building code to maintain safety and protect the occupants of the building.

It is important that the windows & doors in a building are able to withstand the elements of nature, especially in an area known for ultra high winds.

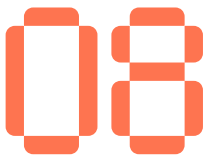

We were involved with Novak + Middleton and Bonnaci Group at the design stage to ensure that the windows and doors would be suited to the Specific Design wind requirements where these luxury apartments were to be built.

Our products are tested to the Extra High (2130 Pa) Wind pressure New Zealand Standard 4211, so we could be confident installing these windows on a site on the hills of Island Bay Wellington, which is often subjected to high winds off the Cook Strait.

We manufactured the windows and doors for the 17 townhouses and delivered to site. The route to the site was also challenging with a narrow winding road and little space to turn around, but our delivery team took it all in their stride and we were able to manufacture and deliver all units within the project time-frame to meet the developers tight schedule.

Sliding, Stacking & Bifold Windows

Sliding & stacking windows are ideal for areas of a home or office where you don't want obstructions beyond the frame, such as walkways or outdoor areas. Use a sliding or stacking window to open up the kitchen to the patio and create a connection with the guests - plus they work well as a servery.

Bi-parting sliding or stacking windows are perfect for creating large openings. Easy to use and their design means that the window can support large panes of glass, so natural light isn't compromised.

With two sliding panels, the stacking window allows around two thirds of the width of a window to open - great way to open up a home or office to the outdoors or just ventilate the area.

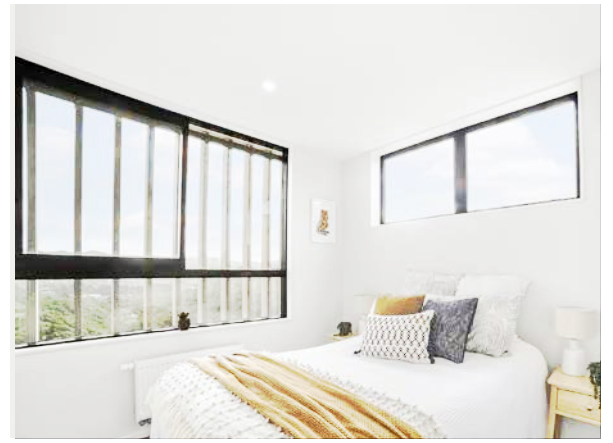

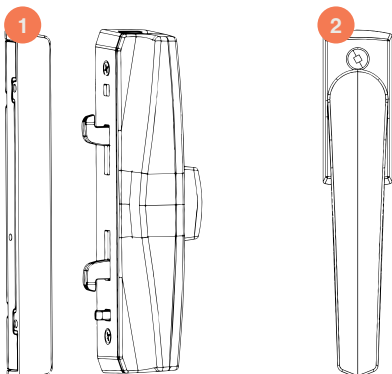

Bifold windows are commonly used in cafes and bars, but are also a great option for a servery dining experience in a home or office dining area. Bifold windows contain specially engineered hardware which enables the leaves to concertina or stack back to one or both ends, creating a large opening.

UNO Windows & Doors is a company who supports builders, developers and construction companies on their projects.

We have made the process simple and easy. Its an end-to-end solution you can trust. We've researched the market, created a product that exceeds the industry standards and developed a system to get it from design to delivery seamlessly.

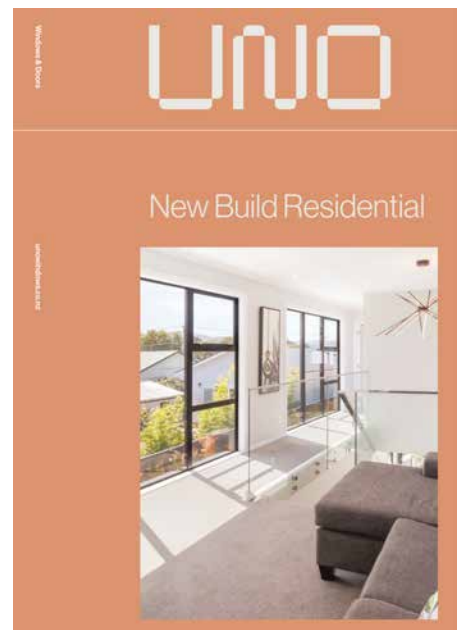

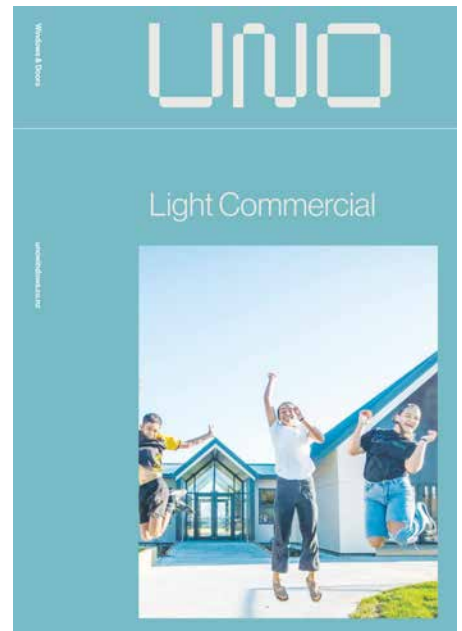

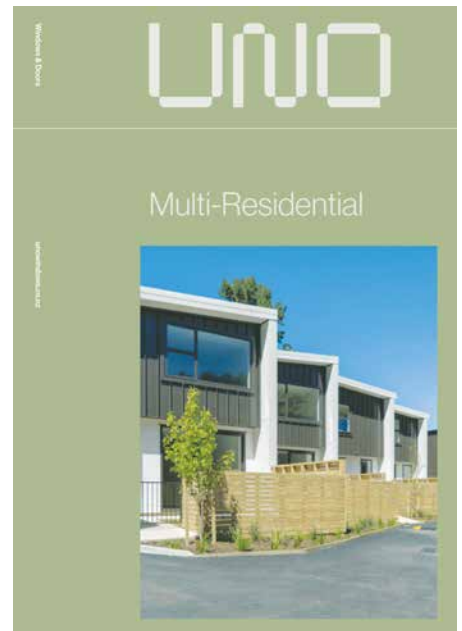

Our three focus areas are:

- Multi-Residential/Apartments
- Light Commercial
- New Build Residential.
